The following is an examiner's statement of reasons for allowance: Hutter (US 4222489) is the closest art of record and teaches magnetic clasp structure that shows the spaced bands 2 of alternating magnetic polarity sequentially arranged across the width of the clamp and generate an open configuration when the facing polarities are alike and a closed configuration when the facing bands are opposite. Hutter accomplishes the relative movement by a flexible hinge with the magnetic portions non-movably secured to the clasp portions. In regard to claim 6, while Schirmuly (EP 29500) teaches the use of a floating hinge in a magnetic clasp including a hinge pin journaled in a slot of one of the clasp portions, there is no shifting of the magnetic material in the clasp portion holding the magnetic material so that there is no suggestion to modify the teachings of Hutter so that the first magnetic portion is moveable relative to the first clasp portion and the second clasp portion between a closed position and open position having the function indicated in lines 5-9 and has a floating hinge as indicated in lines 13-15. As to claim 7, the reasons for allowance provided by applicant in the response received November 14, 2004 on page 8, ¶2 are incorporated herein.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
